5m photovoltaic panel installation method diagram

Overview

What conditions should a solar PV module be installed in?

Risen module should be installed in the following environmental conditions. -20°C to +50°C. Remarks: The working environment temperature is the monthly average maximum temperature and minimum temperature of the installation site. The mechanical load bearing capacity of the solar PV module is determined based on the installation method.

How to connect two solar PV modules?

Two modules can be series connected by plugging the positive connector of one module into the negative connector of another adjoining module. The module connecting cables shall withstand the maximum short circuit current of the module. The special sunlight resistant cables for solar PV systems shall be used.

Where should a solar PV module be installed?

For most places, Risen solar PV modules should be installed where the sunlight can be maximally acquired throughout the year. In the Northern hemisphere, the light-receiving surface of the module is usually selected to face the South; in the Southern hemisphere, the light-receiving surface of the module is usually selected to face the North.

How to install PV modules in hot and humid environment?

PV modules install under hot and humid weather condition. PV modules installation site is under long-term humid environment such as water floating application. To reduce the risk of PID, on the modules DC connection site, it is recommended to connect the negative to ground.

What is the installation manual for LONGi Solar modules?

Installation Manual for LONGi Solar Modules This manual elaborates on installation and safety use information for Solar power generating modules

(hereinafter referred to as module) of LONGi Green Energy Technology Co., Ltd. (hereinafter referred to as LONGi Solar). Please abide by all safety precautions in this guide and local regulations.

How should a solar PV system be installed?

Modules and PV systems should be installed by authorized and qualified personnel. Follow all safety precautions of all components used in the system. Long periods of shading on the module's surface from the sun can result in cell power dissipation and overheating. Do not clean the glass surface with chemicals.
