

## Solar Energy South Africa

# Analysis of wind resistance of photovoltaic bracket

## Overview

---

Why is wind resistance important in PV power generation systems?

Therefore, wind resistance is essential for a safe, durable, and sustainable PV power generation system. There are three modes of support in PV power generation systems: fixed , flexible , and floating [4, 5]. Fixed PV supports are structures with the same rear position and angle.

How wind induced vibration response of flexible PV support structure?

Aeroelastic model wind tunnel tests The wind-induced vibration response of flexible PV support structure under different cases was studied by using aeroelastic model for wind tunnel test, including different tilt angles of PV modules, different initial force of cables, and different wind speeds.

What is the wind vibration coefficient of flexible PV support structure?

The wind vibration coefficients in different zones under the wind pressure or wind suction are mostly between 2.0 and 2.15. Compared with the experimental results, the current Chinese national standards are relatively conservative in the equivalent static wind loads of flexible PV support structure. 1. Introduction.

What are the main wind load issues associated with PV supports?

Making full use of the previous research results, the following are the main wind load issues associated with the three types of PV supports: (1) the factors affecting the wind loads of PV supports—the main factors are shown in Figure 2; (2) the wind-induced vibration of PV supports; (3) the value and calculation of the wind load of a PV support.

How does wind load affect PV panel support?

2. Influencing Factors of Wind Load of PV Panel Support 2.1. Panel Inclination Angle The angle  $\beta$  between the PV panel and the horizontal plane is called the panel inclination (Figure 3). Because of the PV panel's varying inclination

angle, a PV power generation system's wind load varies, impacting the system's power generation efficiency. Figure 3.

How does wind pressure affect a flexible PV support structure?

When the flexible PV support structure is subjected to wind pressure, the maximum of mean vertical displacement occurs in the first rows at high wind speeds. The shielding effect greatly affects the wind-induced response of flexible PV support structure at  $\alpha = 20^\circ$ .

## Analysis of wind resistance of photovoltaic bracket

---

### Structure design and analysis of integrated photovoltaic power ...

Under three typical working conditions, the maximum stress of the PV bracket was 103.93 MPa, and the safety factor was 2.98, which met the strength requirements; the hinge joint of 2 rows ...

### Optimization design study on a prototype Simple Solar Panel Bracket

studying the strength of solar panel bracket structures is crucial for improving the reliability and safety of solar systems. Jiang et al. conducted analysis and research on the structural design ...

### Analysis of Wind Loading on Photovoltaic Panels Mounting Brackets

This paper aims to analyze the wind flow in a photovoltaic system installed on a flat roof and verify the structural behavior of the photovoltaic panels mounting brackets. The study is performed ...

### Wind Load and Wind-Induced Vibration of ...

The outcomes demonstrated that the PV panel's wind load influence variables were parameterized. Additionally, formulas for wind loads were derived together with examples, providing a guide for the design of wind ...

[????????????????????????????????](#)

First, the calculation principle of wind load of photovoltaic bracket of various standards and the value characteristics of related parameters were compared and analyzed. Second, the shape ...

## Numerical Investigation of Wind Pressure Coefficients for ...

Numerical simulations of the wind flow field for wind angles between 0° to 180° were carried out at intervals of 20°, and the resulted net pressure distributions were presented. ...

## Static and Dynamic Response Analysis of Flexible ...

An analysis of the wind-induced vibration responses of the flexible PV support structures was conducted. The results indicated that the mid-span displacements and the axial forces in the wind-resistant cables are ...
