## Overview

What makes Antarctica a good place to store energy?

A room full of classic lead-acid batteries enables the station to store energy for times when demands exceeds the current energy production. While the renewable energy systems that power the station are reliable and continuously checked, even in the harsh conditions of Antarctica, two generators were installed for security and backup.

How do wind and solar power contribute to the Antarctic Program?

Today, wind power and solar power both contribute to the Australian Antarctic Program's energy needs. This content was last updated 4 years ago 16 November 2020. Harnessing natural energies can fuel our Antarctic stations and reduce our dependence on fossil fuels.

What is a hybrid energy system in Antarctica?

Many national Antarctic programmes (NAPs) have adopted hybrid systems combining fossil fuels and renewable energy sources, with a preference for solar or wind depending on the specific location of the research station and previous experiences with certain technologies.

How much energy does Antarctica use?

The current energy supply for the Argentinian Antarctic stations is provided by generators, which consume considerable amounts of diesel fuel in summer: Each station consumes around 100,000 liters per season.

What challenges do solar and wind systems face in Antarctica?

The extreme weather conditions and complex logistics of Antarctica put both solar and wind systems under huge stress, which generates operational, technological and budgetary challenges that are also explored in this work. Percentage of total energy consumption covered by renewable energy sources in Antarctic facilities.

Are there alternative energy sources in Antarctica?

Interest in alternative energy sources in Antarctica has increased since the beginning of the 1990s [1, 6]. In 1991, a wind turbine was installed at the German Neumayer Station . One year later, in 1992, NASA and the US Antarctic Program tested a photovoltaic (PV) installation for a field camp .

### OCR B GCSE Our Natural World: 4 Sustaining Ecosystems CASE

Union Glacier is a large expanse of ice in the Ellsworth Range, part of the Transantarctic Mountains that stretch through the centre of the continent. Equipment is powered by solar energy to reduce the use of fossil fuels. Increasing demands for tourism in Antarctic may pose environmental problems to the fragile ecosystem in the future.
