Mahlaseli Energy is a renewable company that provides solar energy solutions as well as water solutions in Lesotho. In our commitment to the country and planet, we shine bright and hydrate deep, paving the way for a greener, more vibrant future.

Mos-Sun Clean Energy Technologies (PTY) Ltd, trading as MOSCET, is a leading renewable energy technology company based in Lesotho. Since our establishment in 2010, we have been committed to revolutionizing the energy landscape and making a positive impact on communities across the Kingdom of Lesotho.

My name is Matsepiso Majoro, Co-Founder of Mahalseli Energy – a renewable energy company in Lesotho providing solar off-grid solutions for rural electrification, solar thermal, and water supply. Journey into the Sustainable Energy/Climate Sector.

Renewable energy sources such as solar, wind, and hydropower provide clean, reliable energy to the people of Lesotho, helping to reduce the country's dependence on imported fossil fuels. Solar energy is particularly abundant in Lesotho, and the country is making significant investments in the development of solar power plants.

We are "lighting up Lesotho's future" by providing renewable energy to the Basotho Highlands through co-creating sustainability interventions that take the lead from indigenous societies in our work. In Lesotho, there are currently 1.2 million Basotho living without grid supplied electricity – that is 55% of the population. What does the Department of energy do in Lesotho?

The Department of Energy is committed to increasing energy access and ensuring security of energy supply in the country. The Department of Energy

is tasked with promotion and implementation of renewable energy projects and programs. A website of the Department of Energy (DoE) in Lesotho with an Energy Management Information System (EMIS).

What are the potential energy resources in Lesotho?

Potential grid and off-grid renewable energy resources in Lesotho include hydro power, solar and wind energy. Biomass can also be considered where the material can be transformed to produce electricity either through direct combustion or via biogas. Hydro and pumped Storage.
