## Overview

---

How much energy does Burkina Faso use?

Burkina Faso produced 69 kilotonne of oil equivalent (ktoe) of energy in 2015, 89.8% of which was generated from fossil fuels. Final consumption of electricity was 86 ktoe. The country uses energy from biomass, fossil fuels, hydroelectricity, and solar.

Is Burkina Faso a good place for wind energy?

Burkina Faso's location on the west coast of Africa is not ideal for wind energy. The average wind speeds recorded are between 1 and 3 m/s, with the faster speeds recorded in the northern parts of the country. Although this is rather low, it is currently being used to support small-scale water pumping and desalination systems (REEEP, 2012).

How has Burkina Faso changed over the years?

Burkina Faso has made remarkable progress in recent years, with an increase in installed capacity from 324.6 megawatts (MW) in 2017 to 410 megawatts in 2019. The share of renewable energy also surged from 9.4% in 2015 to 18.36% in 2019.

What are the different types of energy transformation in Burkina Faso?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Burkina Faso for 2021. Another important form of transformation is the generation of electricity.

Does Burkina Faso have a solar plant?

West Africa's biggest solar plant began operation in Burkina Faso on November 29, 2017. As of 2020, it is estimated 10.60% of Burkina Faso have access to access to clean fuels for cooking, according to our world in data.

How much carbon dioxide does Burkina Faso emit?

As of 2014, Burkina Faso's total greenhouse gas emissions was at 32.60 million metric tons of carbon dioxide equivalent (MtCO<sub>2</sub>e). The country has committed to reduce its emissions by at least 7.8 MtCO<sub>2</sub>e (or 6.6%) by 2030. The country targets 100% of its electricity generation to come from renewable sources by 2050.
