# Chile industrial power system protection

## Overview

---

How can numerical protection relays be used in an industrial system?

As an example of how numerical protection relays can be used in an industrial system, consider the typical large industrial substation of Figure B3.23. Two 1.6MVA, 11/0.4kV transformers feed a busbar whose bus-section CB is normally open. The LV system is solidly earthed.

What types of protection relays are used in industrial systems?

For an industrial system, the most common protection relays are time-delayed overcurrent and earth fault relays. Chapter [C1: Overcurrent Protection for Phase and Earth Faults] provides details of the application of overcurrent relays.

What is a protection relay for a circuit breaker?

Protection relays When the circuit breaker itself does not have integral protection, then a suitable external relay will have to be provided. For an industrial system, the most common protection relays are time- delayed overcurrent and earth fault relays.
