Overview

What is Christmas Island phosphate?

Christmas Island Phosphates or known on Christmas Island as CIP, commenced its operations in 1990. It mines and processes rock phosphate on Christmas Island. CIP is a significant success story for many reasons. Phosphate mining for 120 years has been the lifeblood of the economy and community of Christmas Island.

How many tonnes of rock phosphate has Christmas Island exported?

Since we began, we have exported over 16 million tonnes of rock phosphate to markets in Malaysia, Indonesia, Australia and New Zealand. This business has been the backbone of the Christmas Island economy.

What happened to phosphate mining on Christmas Island?

Phosphate mining for 120 years has been the lifeblood of the economy and community of Christmas Island. However, in 1987, the Australian Government closed the Commonwealth operated mine with a devastating impact on the Island's economy, community, and jobs prospects, leaving many with little choice but to leave their island home.

Are Christmas Island buildings cyclone rated?

Currently, no buildings on Christmas Island are designed to cyclone ratings (AECOM 2010) which leaves them further prone to the adverse impacts of increased high intensity storm activity. Higher temperatures are likely to increase the demand for energy and water for cooling systems.

Why did UCIW reopen Christmas Island mine?

Leaders in the community and the Union of Christmas Island Workers (UCIW) raised money and 'fought' to reopen the mine to maintain jobs and an economic future for the island.

Will a decrease in rainfall affect Christmas Island National Park?

While future changes to rainfall patterns in Christmas Island National Park are uncertain, a decrease in annual average rainfall and an increase in air temperature and evaporation may impact many of the island's habitats and species (Hyder 2008).
