

## Solar Energy South Africa

# Energy storage cabinet price trend analysis

## Overview

---

What are energy storage cost metrics?

Cost metrics are approached from the viewpoint of the final downstream entity in the energy storage project, ultimately representing the final project cost. This framework helps eliminate current inconsistencies associated with specific cost categories (e.g., energy storage racks vs. energy storage modules).

What will residential energy storage look like in 2024?

In the realm of residential energy storage, projections for new installations in 2024 stand at 11GW/20.9GWh, reflecting a modest 5% and 11% increase. With the decline in both power and natural gas prices, observations from 2023 installations suggest a diminishing sense of urgency for residential installations.

Are energy storage systems cost estimates accurate?

The cost estimates provided in the report are not intended to be exact numbers but reflect a representative cost based on ranges provided by various sources for the examined technologies. The analysis was done for energy storage systems (ESSs) across various power levels and energy-to-power ratios.

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

What are the different types of energy storage costs?

The cost categories used in the report extend across all energy storage

technologies to allow ease of data comparison. Direct costs correspond to equipment capital and installation, while indirect costs include EPC fee and project development, which include permitting, preliminary engineering design, and the owner's engineer and financing costs.

What is the future of energy storage?

Commercial and industrial (C&I) ESS is experiencing a surge in growth, entering a phase of rapid development. The increase in installations for utility-scale ESS far outpaces that of other types. In the realm of residential energy storage, projections for new installations in 2024 stand at 11GW/20.9GWh, reflecting a modest 5% and 11% increase.
