This ESM 48100A1 was certified with an upper charging limit of 55 V. The recommended float voltage is 53.5 V. If 70 V work, good for you, but it's not something I'd do if I could avoid it. The 8 unit parallel limit is if you connect their BMSes with the RS485 interface. If you use the CAN interface you can connect up to 32 in parallel.

[Huawei ESM-48100B1 Changing Slave ID](#)

Hi, I am busy trying to communicate with Huawei ESM-48100B1 batteries through RS485. When polling just one battery I have no issues, but I want to connect more batteries in parallel and read them as a rack. When I procured my batteries they were set to the default slave ID of 214 so they both share the same ID. Looking through the modbus spec
