Overview

How much power is available in Finland in 2023?

As of 2023, the total capacity of power generation in Finland is 19.7 GW. However, not all of that is available at the same time and an increasing amount is intermittent generation, mostly from wind power (see below).

Who produces electricity in Finland?

Major producers in Finland include: Fortum, Pohjolan Voima, Teollisuuden Voima and Helsingin Energia. Nord Pool Spot is the shared power market for Finland and nearby countries. Fingrid Oyj is a Finnish national electricity transmission grid operator. Major distributors are: Helen Oy, Caruna and Elenia.

What's new at EuroPower generators?

Dear Customer, We are very pleased to inform you that from now on, Europower Generators, your beloved partner in energy solutions, will be known as e-power. Along with the new name comes an updated logo and revamped website () and renewed social media presence. A fresh start.

What does EuroPower do?

Europower is leader in engineering, construction, start-up, operation and maintenance of industrial plants producing electricity and thermal energy, waste to energy plants, biomass plants, water treatment and industrial utilities.

How much power will Finland have in winter?

The national grid operator Fingrid, together with TSOs from other Nordic countries, produces yearly estimates about the availability of power in the winter demand peak. In 2019-2020 they estimated a peak Finnish demand of 15.3 GW, during which Finland would have 11.9 GW of production capacity, not including capacity reserves.

Why did EuroPower join E-Power?

“With e-power our aim is to build upon the strong foundations laid out by our predecessors. Evolution is the keyword, not revolution. That is why we are very grateful that all former Europower employees have agreed to join e-power.
