Generator Wind Zone

Overview

What is a 3D wind load generator?

The 3D Wind-Load Generator is a complex tool for generation of wind load acting against buildings. The module is available for the following codes: EC-EN (Eurocode) and IBC (International Building Code).

How does a wind generator work?

The energy in the wind turns the blades that are connected to the main shaft, which turns and spins a second shaft, which spins a generator to create electricity. – A machine that is used to make electricity. When the generator head is turned, this energy is converted to electrical energy.

How does the 3D wind generator work?

It runs the Wind Load Engine that calculates wind zones according to the appropriate code and calculates the load values. After successful calculation a message box is shown. Since version 22, a new visualization of the loads generated by the 3D wind generator has been introduced.

How do wind turbines work?

Wind turbines work on a simple principle: instead of using electricity to make wind—like a fan—wind turbines use wind to make electricity. Wind turns the propeller-like blades of a turbine around a rotor, which spins a generator, which creates electricity. To see how a wind turbine works, click on the image for a demonstration.

What is the new visualization of the 3D wind generator?

Since version 22, a new visualization of the loads generated by the 3D wind generator has been introduced. The generated loads are distinguished by colours: with one colour assigned for pressure (default = light blue) and another colour for suction (default = yellow).

Where can wind turbines be built?

Wind turbines can be built on land or offshore in large bodies of water like oceans and lakes. The U.S. Department of Energy is currently funding projects to facilitate offshore wind deployment in U.S. waters. Modern wind turbines can be categorized by where they are installed and how they are connected to the grid:

5 Best Home Wind Turbine Reviews for 2024

Tumo-Int 1000W 3-Blade Wind Turbine Generator Kit - Best Low Wind Zone Turbine. Overall Rating: 4 out of 5 stars. For a wind turbine kit that will work in lower wind-rated areas, you'll want to check out the Tumo-Int 1000W 3-blade ...

How Do Wind Turbines Work? , Department of Energy

Wind turbines work on a simple principle: instead of using electricity to make wind--like a fan--wind turbines use wind to make electricity. Wind turns the propeller-like blades of a turbine around a rotor, which spins a generator, ...
