UK loses 1.4GW of power in interconnector trip, battery storage ...

Roger Hollies, CTO at Arenko Group, posted on LinkedIn that 1.5GW of batteries across NESO's network were able to inject power into the grid during the disruption, including 12 batteries on Arenko's Nimbus platform. According to BESSAnalytics , Arenko is the optimiser for around 333MW of BESS assets in the UK.

[Blogs , Arenko](#)

Arenko's analysis shows that in June this year this was happening, on average, around 80% of the time. A high percentages of skip rates creates a more carbon intensive grid but also means customers are paying more, as the

increase in cost of energy on the grid is ultimately passed to the consumer.

Balancing Mechanism Skip Rates

Historical Skip Rates. Arenko has managed the Bloxwich asset (E_ARNKB-1) for many years. If we visualise the historical skip rate for the asset on the bid and offer, we can see that there has been significant improvement since the end of 2022, when the BM was effectively at a 100% skip rate. What you see below is a rolling 30 day window of the skip rate.
