# How many photovoltaic panels with brackets are there

## Overview

---

There are several types of solar panel mounts that can be installed on a property owner's land or home. The most commonly used mounting system is a classic roof-penetrating rack. This is simply a rack that is drilled into a roof with additional screw holes or other attachment mechanisms on top of its surface so that the

The next category of rooftop solar panel mounts is specific to surfaces that are not suitable for drilling. This includes tile and metal roofs. For tile rooftops, you can add a special rack like the one pictured above or replace a small portion.

The type of mounts used for rooftop solar panels can be much different than the ones used on a ground-level system. In both cases, however, you should always ensure that the panels are exposed to as much sunlight as possible.
