

## Solar Energy South Africa

# How to connect a single group of Chint photovoltaic panels

## Home Energy Storage (Stackble system)

High Efficiency

Easy installation

Safe and Reliable

Perfect Compatibility

### Product Introduction

-  Scalable from 10 kWh to 50 kWh
-  Self-Consumption Optimization
-  Integrated with inverter to avoid the compatibility problem

-  LFP battery, safest and long cycle life
-  Stackable design, effortlessly installation
-  Capable of High-Powered
-  Emergency-Backup and Off-Grid Function

## Overview

How do you chain multiple photovoltaic modules in an array?

To chain multiple photovoltaic modules — like solar panels — in an array, you must connect them together and to your portable power station or other balance of system. You can do that one of two ways (or a hybrid of both). Series or parallel. But which wiring configuration maximises your electricity generation potential?

Read on to find out.

How do you connect solar panels together?

Connecting PV modules in series and parallel are the two basic options, but you can also combine series and parallel wiring to create a hybrid solar panel array. Some solar panels have microinverters built-in, which impacts how you connect the modules together and to your balance of system. What Are They?

.

How to connect solar panels in series?

Solar connectors can be used to connect solar panels in series, parallel, or series-parallel. Installing them in series is quite simple while installing them in parallel requires an additional component. To connect solar panels in series you just plug the positive connector of a PV module into the negative connector of the next module.

How to connect 4 solar panels in parallel?

For parallel connection, please connect the positive and negative cables of one module and the second module correspondingly. A parallel connection between 4 solar panels could quadruple the amperage. Voltage and wattage output remain the same. If you're worried about the current being too low, consider wiring the four PV panels in parallel.

What is a solar panel string?

The “solar panel string” is the most basic and important concept in solar panel wiring. This is simply several PV modules wired in series or parallel. Solar panels feature positive and negative terminals. Wiring solar panels in series means wiring the positive terminal of a module to the negative of the following, and so on for the whole string.

Can string inverter solar panels be wired together?

As discussed above, string inverter solar panel arrays can be wired together in series or parallel — or a hybrid of both. All PV modules that capture sunlight and convert it into electricity using the photovoltaic effect produce direct current (DC) power.
