# How to control the installation angle of photovoltaic panels

## Overview

---

What is the optimal tilt angle of photovoltaic solar panels?

The optimal tilt angle of photovoltaic solar panels is that the surface of the solar panel faces the Sun perpendicularly. However, the angle of incidence of solar radiation varies during the day and during different times of the year.

What is the best angle for solar panels in the UK?

Generally speaking, the best angle for solar panels in the UK is about 35 degrees from horizontal, although this varies very slightly around the country. A study from 2021 revealed that the best angle for solar panels is typically somewhere between the latitude of the location and 15 degrees below that figure.

How to choose a solar installation angle?

If connected to a stand-alone power system, the installation angle of solar panels should be based on the light conditions to obtain the maximum power output. Generally, if the output of the solar panels can be met even on the lowest light intensity of the year, then the solar output the chosen angle will meet the year-round demand.

What angle should solar panels be installed on a flat roof?

The best angle for a solar panel system in the UK is between 20° and 50°. At this kind of angle, your solar panels will be exposed to more sunlight, which will lead to more energy production and larger savings. If you want to install solar panels on a flat roof, you can still achieve the optimal angle by propping them onto a mounting system.

What is the best angle for solar panels in 2024?

Benefit from the BEST Solar Deals in 2024 and SAVE hundreds per year on your bills! The best angle for solar panels in the UK is between 30° and 40°. To ensure that your solar panels can produce energy optimally, they should be

installed on a south-facing part of your roof.

Why does solar panel orientation and angle matter in a solar power system?

Prior to understanding why solar panel orientation and angle matter in a solar power system, we need to know how a solar panel collects energy from the sun. Solar panel cells only collect a specific wavelength during absorbing radiant energy from the sun.
