How to turn off the power of Fengchao generator

Overview

Simply switch the button or knob on your generator to the OFF position. How do you turn a generator off?

Simply switch the button or knob on your generator to the OFF position. Alternate ways to shut off a whole house generator include switching the breaker, turning off the gas valve, or pulling the electrical disconnect. In this article, we're going to take a look at the best ways to turn a generator off and when a good time is to shut it down.

How to shut off a whole house generator?

The best and safest way to shut off a whole house generator is to do a total and thorough shut down. Here is a step-by-step process of how to complete this type of shutdown. Turn off the transfer switch inside your house that controls the power transfer from the main power grid to the generator.

How do you stop a generator from running?

Find the fuel valve on the generator. It's typically located near the fuel tank. Gently turn the valve to the "OFF" position to stop the fuel flow. Locate the generator's power switch. Move the switch to the "OFF" position to stop the electrical output. Allow the generator to run without any load for a few minutes to cool down the engine.

How do you refuel a generator?

Turn the generator off. When you no longer need the generator's power, or when you need to refuel the generator, you should turn the machine off. First, flip the circuit breaker to the "OFF" position. Then, turn off the machine using the generator's power switch or key. Finally, set the generator's fuel valve to the "OFF" position.

How do you power up a generator?

If necessary, add fuel, oil, or clean the filter before powering up the machine.

Next, make sure the circuit breaker is in the “Off” position, turn on the fuel valve, and use your generator’s “Start” switch or key to power up the machine.

How do you disconnect a generator from a house?

Turn off the transfer switch inside your house that controls the power transfer from the main power grid to the generator. Turn the outside disconnect switch off that controls your generator. This disconnect switch should be located close to the generator and is in the form of a breaker switch or a pull-out switch.
