Overview

Who wrote the IEA special report on batteries & secure energy transitions?

I would like to thank the IEA colleagues who worked on this special report on Batteries and Secure Energy Transitions for their excellent and insightful analysis – under the leadership of Laura Cozzi, Director of Sustainability, Technology and Outlooks, and lead authors Brent Wanner and Apostolos Petropoulos.

Are batteries the key to a sustainable future?

Those pledges include tripling global renewable energy capacity by 2030, doubling the rate of energy efficiency improvements, and facilitating the transition away from fossil fuels. Batteries have an essential role to support of the goal of tripling the installed capacity of renewables worldwide.

Are batteries a key role in energy transitions?

Batteries are set to play a leading role in secure energy transitions. They are critical to achieve commitments made by nearly 200 countries at COP28 in 2023. Their commitments aim to transition away from fossil fuels and by 2030 to triple global renewable energy capacity and double the pace of energy efficiency improvements.

What's new in battery technology?

These include tripling global renewable energy capacity, doubling the pace of energy efficiency improvements and transitioning away from fossil fuels. This special report brings together the latest data and information on batteries from around the world, including recent market developments and technological advances.

How should EVs and battery storage be regulated?

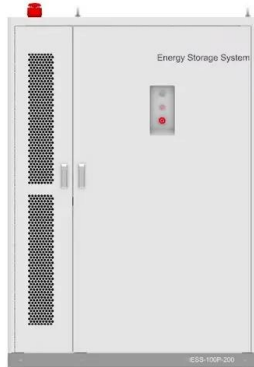

Establish clear and stable regulatory frameworks that define the role of EVs and battery storage in the energy transition. This involves clarifying the role

over time of these technologies in the context of clean energy transition plans and emissions reduction targets.

Why is battery use growing in Africa?

Battery use is also growing in emerging market and developing economies outside China, including in Africa, where close to 400 million people gain access through decentralised solutions such as solar home systems and mini-grids with batteries in order to achieve universal access by 2030.

Batteries and Secure Energy Transitions

International Energy Agency , Batteries and Secure Energy Transitions. Governments have an important part to play in building out resilient local and international supply chains to ensure that securely and sustainably produced batteries come to market at a reasonable cost. Legislation such as the Inflation Reduction Act in the United States, the

Batteries and Secure Energy Transitions

International Energy Agency , Batteries and Secure Energy Transitions. Many highlevel government representatives and international experts from outside of the - IEA have contributed to the process, from early consultations to reviewing the draft at a later stage, and their comments and suggestions were of great value. They include:

Batteries and Secure Energy Transitions - Analysis

The IEA's Special Report on Batteries and Secure Energy Transitions highlights the key role batteries will play in fulfilling the recent 2030 commitments made by nearly 200 countries at COP28 to put the global energy system on the path to net zero emissions. These include tripling global renewable energy capacity, doubling the pace of energy

IEA

Batteries are an important part of the global energy system today and are poised to play a critical role in secure clean energy transitions. In the transport sector, they are the essential component in the millions of electric vehicles sold each year. In the power sector, battery storage is the fastest growing clean energy technology on the market.

IEA Batteries and Secure Energy Transitions - World Energy Transition

In the NZE Scenario, about 60 per cent of the CO₂ emissions reductions in 2030 in the energy sector are associated with batteries, making them a critical element. Batteries in EVs and storage installations reduce the need for imported fossil fuels, increasing self-sufficiency in many countries.
