

## Solar Energy South Africa

# Install several solar panels

## Overview

---

How do I install multiple solar panels?

To install multiple solar panels, you'll need to connect them in a series or parallel connection. Connect all the wires to your charge controller, battery and inverter. This may take some time. Follow the setup instructions very carefully here and make sure all wires are connected exactly as instructed.

Can I install my own solar panels?

Yes, you can install your own solar panels. Sunstore Solar can provide professional installation, but we appreciate some people like to get stuck into a project. We designed our solar panel kits specifically for DIY solar panel installation projects. And what better project than providing energy security for your family or business?

.

How do I plan a solar panel installation?

Choose a supplier and establish if the installation will fall under Permitted Development or if full planning permission is required 3. Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5.

Where can I install solar panels?

You can install them on your home, business premises, outbuilding, garden office, shed, workshop or garage – and even shepherd's huts for those who run a luxury holiday let facility. As long as the roof is strong enough and large enough to fit the units, you can install solar panels on whatever type of property you want to supply energy to.

Can you install solar panels on a roof?

Most DIY home solar panel installations in the UK are roof mounted. As long as

you're happy up a ladder, the process isn't as difficult as you might imagine. We recommend planning in advance where you'll put the panels to determine where you need to install the frames and brackets. It's a lot easier when you have a plan!.

Which direction should solar panels be installed on a roof?

The ideal orientation for installing solar panels on a roof in the UK is typically facing south or within 90 degrees of south. Specifically, south-facing roofs receive the maximum amount of sunlight throughout the day, making them the most efficient orientation for solar panel installations.
