

## Solar Energy South Africa

# Installation process of solar photovoltaic panels

## Overview

---

### How are solar panels installed?

We use a safe and strong installation method that uses friction to hold the rail and the edge of the solar panel securely in place. This system has been tested for heavy rain, hail and even hurricanes, so you know it's reliable. The panels are then laid on top of the rails, ready to be connected.

### How do you install solar panels on a roof?

Start with a solid foundation, which is essential to add solar panels to a roof or a ground platform. For roof installation, lag bolts are attached to the rafters, and a piece of flashing is used on top of the shingles to prevent leaks. The flashing slides under the shingle wherever a lag bolt installation occurs.

### How long does it take to install a solar inverter?

The installers will set up the inverter by the breaker panel, a sort of hub for all electrical circuits within your home. The installation process will take around 4 to 6 hours. If you have decided to also buy a solar battery, enabling you to store energy produced by your panel for later consumption, then the inverter will be connected to it.

### How does a solar panel installation work?

The installer will have to lift some of the roof tiles to fix the anchors to the rafters in the loft. This will give the solar panel mounts a stable foundation, and will make sure they don't get damaged in stormy weather. Once the roof anchors have been fixed to the property, the installer will attach the solar panel mounting system to them.

### What is needed to install solar panels on UK homes?

Here's a quick guide to what's needed to install solar panels on UK homes: An installer should visit to determine if the property is suitable for solar panels. They will look at the size and orientation of the roof to decide the best location

and angle for installing panels.

Can solar panels be installed on a house?

If you're getting solar panels installed onto the roof of your house, the installers will need to construct scaffolding around the building before they can crack on with the process. This will take the most time out of all the steps - usually about a day - but will mean the installers can have safe and secure access to the roof.
