Is it okay to invest in photovoltaic solar power generation

Overview

Going solar is a major decision that requires research and due diligence. To get you started, we've compiled a breakdown of key pros and cons to help you make an informed decision. Is solar PV a good investment in 2022?

Solar PV comprised almost 45% of total global electricity generation investment in 2022, triple the spending on all fossil fuel technologies collectively. Investment in PV is expected to grow further in the coming years thanks to ambitious government targets, policy support and increasing competitiveness.

Are solar panels a good investment?

Over the past decade, the cost of solar power has halved, making it a more attractive option for homeowners. With gas prices on a rollercoaster and climate change concerns mounting, solar panels are expected to become even more cost-effective in the future. After installation, solar panels start saving you money on energy bills immediately.

Should you invest in solar energy?

Another pro of solar investing is the fact that there's a relatively low environmental impact as compared with fossil fuels. While anything will have some impact, solar-powered electricity offers much lower greenhouse gas emissions than oil and coal, and it doesn't do the same damage to the land that you see with fracking.

Are solar batteries a good investment?

Solar batteries are an additional investment that allows you to store surplus solar energy for later use or to sell back to the National Grid. Starting at £4,000, solar batteries mean a longer time to break even when combined with the cost of solar panels.

Is solar energy a sustainable investment?

As more individuals, companies and governments become concerned about global climate change caused by carbon emissions, there's an increased interest in renewable energy as part of a socially responsible investing portfolio. One of the most often-cited types of alternative energy is solar power. 6 Places to Find Sustainable Investments.

How much will the power sector invest in solar in 2024?

Power sector investment in solar photovoltaic (PV) technology is projected to exceed USD 500 billion in 2024, surpassing all other generation sources combined. Though growth may moderate slightly in 2024 due to falling PV module prices, solar remains central to the power sector's transformation.
