

Solar Energy South Africa

Jersey sin energy

Overview

How is energy supplied to Jersey?

Energy is supplied to Jersey predominantly through imports; there is also a small amount of on-Island production. The primary supply of energy is either distributed to consumers in its original form or is transformed into different sources of energy; for example, petroleum products can be burned to generate electricity.

What percentage of Jersey's energy supply is imported?

almost all of Jersey's energy supply was imported; about 2% was produced on-Island as electricity generated by the Energy Recovery Facility and Jersey Electricity solar panels petroleum products accounted for about three-fifths (60%) of Jersey's energy supply; electricity (imported and on-Island generated) accounted for the remainder (40%).

What are the Energy Trends in Jersey in 2022?

The latest published report on energy trends is for 2022. almost all of Jersey's energy supply was imported; about 2% was produced on-Island as electricity generated by the Energy Recovery Facility and Jersey Electricity solar panels.

What was Jersey's energy consumption in 2021?

Jersey's total primary energy supply (TPES) was 6% less than in 2021 total final energy consumption (FEC) was 5% less than in 2021 energy consumption per head of resident population was 1.3 toe and was below that of the UK (1.9 toe).

How does Jersey's energy data work?

Jersey's energy data is submitted annually to the compilers of the UK's national greenhouse gas inventory, Aether, who independently verify and validate the data using internationally agreed methodologies.

How is energy flow measured in Jersey?

The overall flow of energy in Jersey may be examined by combining all the individual commodity balances into an “energy balance” which shows the energy flows from production to final use, including movements between fuel categories.
