Overview

Does Luxembourg need a national energy and Climate Plan?

Summary Regulation (EU) 2018/1999 of 11 December 2018 on the Governance of the Energy Union and Climate Action requires the Member States of the European Union to submit an integrated national energy and climate plan. This draft integrated national energy and climate plan defines the scope of Luxembourg's energy and climate policies up to 2030.

What will Luxembourg do under the Luxembourg chairmanship?

Under the Luxembourg chairmanship, the Benelux states will concentrate on the energy transition, the fight against climate change, strengthening the internal market and promoting digitisation. In this regard, the topics of energy transition, renewable energy and cross-border energy security will be further developed.

Why does Luxembourg use gas?

Since gas, like other fossil fuels in Luxembourg, is also used extensively for heating and cooling, Luxembourg is pushing for an increase in energy efficiency as well as the increased use of renewable energy for heating and cooling. Among other things, this should also reduce the import dependency of third countries. 4.5.

Does Luxembourg support a new European market design for electricity markets?

Luxembourg is supporting the European Commission's efforts to develop a new European market design for the electricity markets. The consistency of electricity market design in the Member States will be of paramount importance here.

Does Luxembourg have energy security?

Energy security dimension Luxembourg has neither large power stations for

generating electricity, nor installations for generating and storing gas. It is therefore largely dependent on energy imports and thus on a functioning European internal market for electricity and gas.

How a vehicle is energy efficient in Luxembourg?

Depending on the age of the registered vehicles, the existing vehicles in Luxembourg have specific energy consumption and corresponding specific CO₂ emissions (g/km). Continual developments in the field of drives and, for example, in the field of lightweight construction or aerodynamics increase the energy efficiency of corresponding new vehicles.
