Malta life power

Overview

Energy in Malta describes production, consumption and import in . Malta has no domestic resource of and no gas distribution network, and relies overwhelmingly on imports of fossil fuels and electricity to cover its energy needs. Since 2015, the allows Malta to be connected to the and import a significant share of its elec.

What is energy in Malta?

Energy in Malta describes energy production, consumption and import in Malta. Malta has no domestic resource of fossil fuels and no gas distribution network, and relies overwhelmingly on imports of fossil fuels and electricity to cover its energy needs.

How has Malta changed its energy mix?

In recent years, Malta has transformed its energy mix used for electricity generation from one based on heavy fuel oil and gasoil to a more sustainable combination of natural gas, electricity imports via the Malta-Italy subsea connection, and increased use of renewable energy sources.

How secure is Malta's energy supply?

The security of Malta's energy supply is a key area of focus for us. Being a small island, Malta has a small electricity supply system and only a single electricity supplier (Enemalta plc) and depends heavily on imported energy sources. Malta also has no natural gas pipeline interconnection with neighbouring countries.

What percentage of energy is renewable in Malta?

As of 2017, renewables represented 4.9% of gross inland energy consumption and 6.6% of gross electricity generation in Malta, some of the lowest shares in the European Union. Most of the renewable energy generated in Malta is solar energy, with some wind and Combined Heat and Power (CHP) generation.

Does Malta use fossil fuels?

Malta has no domestic resource of fossil fuels and no gas distribution network, and relies overwhelmingly on imports of fossil fuels and electricity to cover its energy needs. Since 2015, the Malta–Sicily interconnector allows Malta to be connected to the European power grid and import a significant share of its electricity.

How many electricity plants are there in Malta?

Malta has four electricity plants operational and the total combined nominal installed capacity is 537.8 MW. The Malta–Sicily Interconnector, which has been in operation since April 2015, allows for an electricity link between the Maltese Islands and the Italian electricity market has bidirectional flow capacity of 200 MW.
