

## Solar Energy South Africa

# New Caledonia alhoda solar energy

## Overview

---

What will Prony resources New Caledonia do with solar energy?

Per a 25-year renewable power purchase agreement, the clean energy produced from the solar projects will supply power to industrial operations of Prony Resources New Caledonia. TotalEnergies will use its expertise in solar projects to build a 160-MW solar project, with the first phase of 30 MW expected to come online by 2023.

Will totalenergies build a 160-MW solar project in New Caledonia?

TotalEnergies will use its expertise in solar projects to build a 160-MW solar project, with the first phase of 30 MW expected to come online by 2023. Once this project is fully operational, it will be sufficient to meet 67% energy needs of Prony Resources New Caledonia and significantly lower carbon emissions.

What is New Caledonia Energy?

New Caledonia Energy is the entity responsible for developing the project for the new power station that will supply the energy for Société Le Nickel (SLN). The current power station is nearly 50 years old and is highly polluting. The ultimate goal is to have a carbon-neutral plant by 2030, which would be a world first in the mining sector.

What will totalenergies do in New Caledonia?

Noumea, December 20, 2021 - TotalEnergies will develop a series of photovoltaic and energy storage projects in New Caledonia in order to deliver decarbonized electricity via a 25-year renewable power purchase agreement (PPA) for the industrial operations of mining and metallurgy consortium Prony Resources New Caledonia.

Does Prony resources New Caledonia support decarbonization?

"Prony Resources New Caledonia's commitment to decarbonization is both ambitious and pioneering in the industry. We are very proud to support their

energy transition, and that of New Caledonia," said Thierry Muller, CEO of TotalEnergies Renewables France. "As industrial firms, we think and act responsibly.

## **ENERGY**

Strong energy dependence linked to the metallurgical sector. New Caledonia's energy mix is 97.7% fossil fuel, including 54.1% petroleum products (mainly fuel oil and diesel), 43.6% coal, and 2.3% renewable energies. This high energy dependence is directly linked to the metallurgical industry which consumes 61.2% of the total energy consumption of the territory.

## [New Caledonia \(1\)](#)

The development of clean energy in New Caledonia is still limited but with high potential. The sector is gaining momentum under the combined effects of public impetus and the fall in the cost of renewables. Hospitals are on the list of institutions that need continuous access to electricity to ensure ICU is 24/7 available.

## New Caledonia: a considerable carbon footprint

This archipelago is a mix of continental crust (from the mainly submerged continent of Zealandia) and coralline atolls, which explains the high level of endemism of the region and the diversity of species found there. 74% of plant species in New Caledonia are found nowhere else in the world, and the same is true for 95% of its reptile species and 23 species of birds.

## New Caledonia , Clean energy for EU islands

The biggest challenge for New Caledonia in the transition process to date has been to make it clear to economic players that energy efficiency is a viable investment - while it can in some cases and temporarily lead to additional costs initially, these are then largely offset by energy savings. New Caledonia is further looking to extend the
