Rated voltage

**768V**

Cell type

**Lithium iron phosphate**

## Overview

Is New Zealand building more renewable electricity?

New Zealand is building more renewable electricity generation. However, renewable generation (like wind and solar) vary with the weather, so renewable electricity supply may not match up with demand. Grid scale batteries soak up excess renewable electricity, and then release it back to the grid when needed.

Why is New Zealand transitioning to a highly renewable electricity system?

New Zealand is transitioning to a highly renewable electricity system. This change will require increased and accelerated investment in new electricity generation to match demand growth and the retirement of thermal power plants.

How many investment projects are there in New Zealand?

There is also a list of 145 investment projects which have been publicly announced (as at June 2024), with information on each project's status. Projects range in size from 1MW to 1000MW and are predominantly wind and solar, but also geothermal, hydro and battery. They are geographically spread, but mostly in the North Island to match demand.
