

Solar Energy South Africa

Niger leader solar

Overview

Why is Niger a solar energy hub?

Niger was one of the first countries across the world to consider renewable energy technologies as a solution to its energy needs. This dates back to the 1960s, when Niger set up the Solar Energy Office (Office de l'Énergie Solaire – ONERSOL), later renamed the National Solar Energy Centre (Centre National d'Énergie Solaire – CNES).

How has solar technology been promoted in Niger?

Solar PV and other solar energy technologies continued to be promoted in Niger through various outlets, including the national school television programme. Solar technology installation also continued, largely in PV pumping areas and through education and health infrastructure electrification.

Who is involved in the energy sector in Niger?

The energy sector in Niger contains a multitude of stakeholders, which include government bodies and parastatal organisations, NGOs and associations as well as the private sector. Some of these play multiple roles in policy, regulation, finance, knowledge generation and advocacy.

How can Niger balance its energy mix?

This transformative project, funded by the World Bank through the International Development Association (IDA), will enable Niger to better balance its energy mix, which is currently largely dominated by thermal energy. This initiative is particularly crucial for a country that frequently faces climatic shocks.

Does Niger have solar power?

Before moving ahead, further data need to be collected and analysed to ensure their potential and viability. Niger enjoys high solar radiation

conditions in all eight of its regions. Average solar radiation is 5-7 kWh/m² per day (figure 9), and there are seven to ten hours of sunshine per day on average.
