

## Solar Energy South Africa

# Niger rankine energy

## Overview

---

What is the energy potential of Niger?

Niger has significant energy potential, rich and varied, that is weakly exploited. It consists of biomass (firewood and agricultural residues, the main source used by households for cooking), uranium, mineral coal, oil, natural gas, hydroelectricity and solar energy.

Where can I find information about energy in Niger?

Find relevant data on energy production, total primary energy supply, electricity consumption and CO<sub>2</sub> emissions for Niger on the IEA homepage. Find relevant information for Niger on energy access (access to electricity, access to clean cooking, renewable energy and energy efficiency) on the Tracking SDG7 homepage.

How much energy does Niger use?

Final energy consumption in Niger is estimated at 0.15 toe per capita, one of the lowest in the world. The weakness of this value is mainly due to limited access of Niger's households to modern energy. Indeed, over 90% of Niger's households use wood as fuel for cooking. Access to modern cooking fuels and other modern energy is still very limited.

Does Niger need electricity?

Access to electricity remains a challenge in Niger and the country is reliant on electricity imports for a significant share of its supply. The country is an oil resource centre and it is one of the ten-largest uranium resource-holders in the world.

Why is access to energy a problem in Niger?

Despite this rich potential, access to energy is still a challenge for the authorities. Final energy consumption in Niger is estimated at 0.15 toe per capita, one of the lowest in the world. The weakness of this value is mainly

due to limited access of Niger's households to modern energy.

Does Niger use wood for cooking?

Indeed, over 90% of Niger's households use wood as fuel for cooking. Access to modern cooking fuels and other modern energy is still very limited. According to the energy balance of 2012, total primary energy supply in the country is estimated at 2747 ktoe, of which over 70% comes from biomass.

The Government of Niger created ANPER to design, implement, and monitor country-wide rural energy efforts to help Niger achieve universal rural electrification by 2035. ANPER realized that solar mini-grids offer a cost-effective, fast pathway to delivering first-time energy access to 1,000 rural villages. ANPER also knew that the country needed
