

Overview

We have broken the process down into six logical steps. Each provides the foundations for the next and by the end of the process, you should have a fully functioning off-grid solar power system ready to deliver renewable energy to your home. Those six steps are: 1. Assess your power requirements 2. Select.

Before you do anything else, you need to assess how much power you need to generate. That begins by looking at where you're planning to install your off-grid solar power system and how you'll use it. Is it for your main home?

Is it.

There are several main types of solar power system including DC, AC, AC hybrid and AC with generator backup. Each provides green energy for slightly different situations and each has strengths and weaknesses. 1. A DC.
