

## Solar Energy South Africa

# Panama island power producers

## Overview

---

How much power does Panama have?

Panama's installed electrical capacity has grown steadily over the last decade. As of 2020, the country had 4116 MW of installed capacity, relying on a mix of fossil fuels (44.2%), hydro power (43.9%), wind (6.6%) and solar (5.2%).

Is Panama phasing out diesel power plants?

Panama has committed to phasing out power plants that burn diesel or other heavy fuels by the end of 2023, with the decommissioned capacity to be replaced by the 670 MW Gatún power station, a natural gas plant scheduled to begin operations in 2024.

Does Panama have a power station?

Panama's older Bahía las Minas power station has shut down completely, while the newer Cobre Panamá power station has committed to converting to natural gas by December 2023. In 2014, approximately 15 million long tons of thermal coal passed through the Panama Canal.

What is Panama's energy supply?

This page is part of Global Energy Monitor's Latin America Energy Portal. Panama currently relies on imported oil for the majority of its total energy supply. In the electrical sector, hydro energy also plays a key role, accounting for 43.9% of installed capacity and 67.2% of total generation as of 2020.

Does Panama produce coal?

Panama does not produce coal and accordingly has no new sources or projects. As of 2016, Panama consumed 330,693 short tons of imported coal and ranked 86th in the world for coal consumption.

How much coal does the Panama Canal produce?

In 2014, approximately 15 million long tons of thermal coal passed through the Panama Canal. The canal is a key conduit for shipments of Colombian coal to Asia and the Pacific coast of South America. Panama does not produce crude oil or natural gas.
