ARENA opens consultation in battery manufacturing in Australia

The Australian Renewable Energy Agency (ARENA) confirmed last week (11 September) that the AUS\$523 million Battery Breakthrough Initiative has opened a consultation into the scheme. The Battery Breakthrough Initiative announced in the 2024-25 Federal Budget in May, aims to fund projects to enhance Australia's battery manufacturing capability

New supercapacitor shrinks in size but grows in features

Supercapacitors cannot yet replace lithium-ion batteries in terms of energy storage, although the technology is improving every year. New market opportunities, like smart grids and alternate energy sources, are also key growth areas for supercapacitors. These markets benefit from the wide temperature ranges supported by the devices.

Supercapacitor vs. lithium cell: More power, less energy?

This makes supercapacitors the best for storing and releasing large amounts of power more quickly, but batteries are still the winners for storing large amounts of energy over long periods of time. There are hybrid types of supercapacitors that contain elements of a lithium-ion cell together with a supercapacitor. These have a higher energy

Hybrid Metal-Ion Supercapacitors: Batteries & Supercaps

The best of both worlds: An alkali metal-ion hybrid supercapacitor is composed of a battery-type electrode and a capacitor-type one, with alkali metal ions transporting in the bulk of the whole device. In this minireview, we introduce the energy storage mechanisms and summarize recent progress in this kind of devices.

...

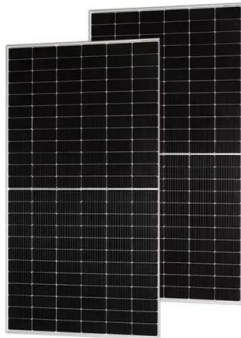

A typical lithium-ion battery can be charged fewer than 1,500 times without significant degradation, however recent advances in supercapacitors with two-dimensional materials were able to boost this recharge process to a few thousand times. The UCF process yields a supercapacitor that does not degrade--even after it has been recharged 30,000

Electric vehicles: putting the 'super' in supercapacitor

If [the new polymer] translated into a 100-fold improvement in supercapacitor energy density, that would be three to seven times the energy density of a lithium-ion battery," Heathcote says. "If that were the case, then you would be able to reduce the weight and the amount of materials going in as the storage system for your car by a very
