Photovoltaic panels are not safe

Overview

As with any electrical appliance, solar panels can be at risk of electrical damage and dangers, such as panel fires and power surges. Are photovoltaic solar panels safe?

The risks associated with the use of renewables are often overlooked and this poses serious problems for insurers. However, we are keen to support our customers and to provide guidance on how photovoltaic solar panel systems can be installed and used safely.

Are solar panels fire safe?

Recommendations for fire safety with PV solar panel installations is a joint code of practice for fire safety with photovoltaic panel installations, with a focus on commercial rooftop mounted systems, but it has lots of guidance for solar panel systems in general too.

Are solar PV panels regulated in the UK?

Challenges arise from the varying quality of installation. Whilst solar PV products must meet UK quality assurance standards, there are currently no regulations covering installation. Solar PV panels generate electrical energy in the form of direct current (DC).

How to minimise fire risk from solar PV systems?

The solar industry welcomes clarity on how to minimise fire risk from solar PV systems, which in absolute terms is extremely low. "The core way to mitigate any risk is to ensure the highest possible quality in the design, installation, operation, and maintenance of solar systems.

Can a solar panel fire damage a building?

Planning and design issues can also add to the risk of solar panel fires, causing damage to not just the PV installation, but the building on which they are mounted. An example of this would be a PV system being installed on a

combustible/partially combustible roof, with no fire-resistant covering.

Can solar panels catch fire?

Whilst the risk of solar panel systems catching fire is extremely low, like any other technology that produces electricity, they can catch fire.
