warranty

## Overview

---

For many centuries, the scale of a city was determined by the amount of food its arable belt could produce and how quickly this food could be transported to the markets (Steel 2008). Innovations in ocean bulk transportation and the expansion of railway networks in the nineteenth century allowed cities to expand this.

Urban livestock farming, the raising of domesticated animals for the production of human food within or at the perimeters of cities and villages, used to be an ordinary practice in the beginning.

Two sustainable scenarios are evaluated based on their avoided carbon emissions and generated thermal or electrical energy, normalised per.

Over the past decades, the distance between the consumer and the farm has increased, as did the distance between the animal and the farm that.

Kattenburg is a high-density residential neighbourhood and former harbour zone located in the city centre of Amsterdam (Fig. 12.3). As of 2019, Kattenburg has 1801 residents divided over 1061 households (OIS).
