Power outages begin in Iran due to fuel shortage

Outlook on Iran's energy policy. With around 80% of Iran's electricity derived from thermal power plants reliant on gas, the administration faces mounting pressure to address what experts say is a systemic fuel shortages. Energy committee member Sepahvand said that without consistent gas supplies, disruptions may persist across both

[Iran Power & Renewables Report](#)

New power capacity is planned in Iran, mostly in the thermal sector, which will result in a stable upward trend in electricity generation over the course of our 10-year forecast. We forecast electricity generation to increase by an annual average of 2.3% between 2024 and 2033,

totalling 454.3TWh in 2033. Iran's power mix is overwhelmingly thermal based, with gas generation ...
