

Solar Energy South Africa

Power system com Isle of Man

Overview

In 1982 Tynwald appointed a Commission to examine the amalgamation of the Douglas Corporation Electricity Department and Isle of Man Electricity Board. The Commission reported in May 1983 in favour of the establishment of a single authority for the whole island. The Manx Electricity Authority was established in July 1983 to develop and maintain an efficient and economical system of electricity supply for the Island. Its legal position was established by the EI.

Is the Isle of Man a gas-fired power station?

This power station is the only gas-fired power station operating on the Isle of Man. With an expected retirement year of 2035, the government of the Isle of Man is working to phase out all fossil fuel fired power generation by 2040.

How can a power interconnector be used in the Isle of Man?

The interconnector can be used to supply the additional energy demand, as well as balancing capability. The diesel engines at Peel and Pulrose with a collective output of 90 MW can together meet island demand. These generating assets and the interconnector can meet the Isle of Man electricity demand requirements.

Could the Isle of Man re-import electricity from an offshore wind farm?

With interconnectors the Isle of Man could re-import electricity generated from an offshore wind farm, allowing GB to manage the balancing. This would likely result in much lower costs to consumers. CFDs are not currently open to the Isle of Man as it is not part of the UK.

Can electricity be decarbonised on the Isle of Man?

Electricity generation is responsible for approximately 33% of all greenhouse gas emissions on the Isle of Man, and a majority of this is currently sourced from fossil fuels (natural gas). Without the decarbonisation¹ of electricity, it will not be possible to reduce carbon emissions significantly in other areas such as heating and transport.

Would the Isle of Man need a power purchase agreement?

The Isle of Man would require a Power Purchase Agreement (PPA) or merchant trading of power to allow export to other jurisdictions. This would also require additional interconnectors between the Island and GB. As mentioned, these are unlikely to be economically favourable.

Can the Isle of Man provide stabilising power to GB or ROI?

Opportunities for the Isle of Man to provide stabilising power to GB or ROI from a large-scale baseload power station, e.g. biomass or a small modular reactor?

Neither option is without challenge, but likely provide the greatest potential for export. These options have not been explored in the analysis.

Power system com Isle of Man

Isle of Man

The Kingdom of the Isles about the year 1100
 The Braaid in the central Isle of Man, with remnants of a Celtic-Norse roundhouse and two longhouses, c. AD 650-950. The island was cut off from the surrounding islands around 8000 BC as sea levels rose following the end of the ice age. Humans colonised it by travelling by sea some time before 6500 BC. [23]

Moving to clean Heating Systems

GTEC Isle of Man. GTEC is the UK's #1 Renewable Energy Training Provider, with over 15 years' experience upskilling trades people to take advantage of the opportunities presented by low carbon heat and power. GTEC's training is provided on-Island and dedicated to advancing skills in renewable energy and sustainable technologies.

The Power of Solar - Gef - Isle of Man

The system was jointly funded by Zurich on the Isle of Man, and the Zurich Carbon fund which is supported by Zurich Insurance Group and also allows employees to top-up their electric vehicles for free via a number of charging points.
