Projecte energy condenser Switzerland

Overview

How do energy condensers work?

The energy condensers turn items into other items, set the target item in the too right slot and pump items in to convert them into the target item. Project EX has something for that, but it might be a bit overkill. Heyo, I have been looking around and trying to pull EMC from my system into a condenser, without going through a new EMC generator.

What is the energy condenser added by Projecte?

This page is about the Energy Condenser added by ProjectE. For other uses, see Energy Condenser. The Energy Condenser is a machine added by ProjectE, based off the Energy Condenser added by Equivalent Exchange 2. The Energy Condenser performs three functions.

Can I use energy condensers to convert items into other items?

You don't really. The energy condensers turn items into other items, set the target item in the too right slot and pump items in to convert them into the target item. Project EX has something for that, but it might be a bit overkill.

What is the best thing to put in an energy condenser for a

Power flowers generate emc from effectively nothing. The item you're condensing EMC into is entirely up to you. Diamond blocks, emerald blocks and stuff like that are just convenient because they're really dense in terms of EMC, so you don't have to move as many items from the condenser to the table.

[Alchemical Chest \(ProjectE\)](#)

The Alchemical Chest is a chest and crafting component added by ProjectE, based off the Alchemical Chest added by Equivalent Exchange 2.. The Alchemical Chest is a large chest, capable of holding 104 stacks of items (compared to a vanilla double-chest's 72 stacks). In addition, the chest can be upgraded with some utility items that perform special effects.

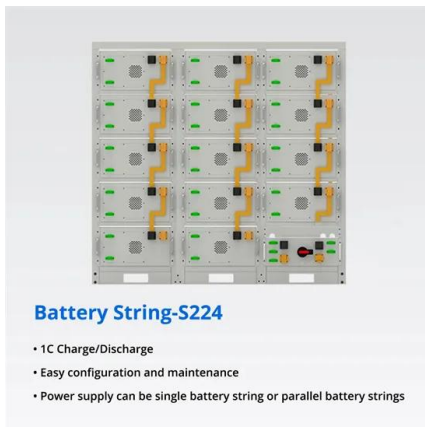

[Getting Started \(ProjectE\)](#)

This is a community-written guide. It was written to help players to get accustomed to ProjectE. ProjectE is a remake of Equivalent Exchange 2 and is a magic mod that allows players to convert almost any item into energy, and convert that energy into almost any other item. At its core is the concept of Energy-Matter Covalence, or EMC. Almost every vanilla item, and many modded ...

[Energy Collector MK1](#)

Energy Collector MK1 is a tier 1 passive EMC generator added by ProjectE, based off the Energy Collector added by Equivalent Exchange 2. It passively generates 4 EMC every 1 second up to a maximum of 10,000 EMC depending on the highest light level. When placed adjacent to an Energy Condenser MK1, Energy Condenser MK2, Anti-Matter Relay MK1, Anti-Matter Relay ...

It hasn't been patched as far as I know. I have a ludicrite setup that uses the Energy Condenser Mk 2 for each ingredient feeding into a tier 3 crafter on fast mode with translocators (1 stack of items per tick), which creates ludicrite that feeds back into each energy condenser and a ...

Energy Condenser

The Energy Condenser stores raw EMC and converts it into any item in game that has an EMC value. The Energy Condenser must have a target block in the target slot (top left next to the energy bar). Once an item is placed in the target slot, if the Energy Condenser is adjacent to an EMC source such as an Antimatter Relay or directly next to an Energy Collector, it will start to ...

Is there a way to add EVEN MORE ProjectE Energy Collectors to

The optimal design depends on exactly how much EMC you have available for building the

structure, but usually the best configurations just involve making two diamond-shaped checkerboards that are offset by a block (so each relay has 5 collectors and each collector apart from the ones on the edges is helping 5 relays, so the middle of the structure is about as good ...

ProjectE Energy Condenser integer overflow? : r/feedthebeast

ProjectE Energy Condenser integer overflow? I dropped a stack of octuple compressed cobblestone into an Energy Condenser MK2 while creating Avaritia's singularities, and it promptly broke. I was thinking it would just consume them one at a time every time it needed more energy to create the blocks of iron, but I think it just decided to eat

whats the best auto EMC farm for ProjectE : r/feedthebeast

The best in projectE alone is just collectors with relays around an energy condenser with many watch of flowing time around. If you also have Project EX stuff is different as you can import items directly into EMC Reply reply

Project E Energy Collector : r/feedthebeast

Place stack of Charcoals into the slots on the left, Energy Collector will pick one move to the bottom slot and when there will enough EMC in the internal buffer will transform it into Redstone moving it back to the left area. Energy Collector can also send the collected EMC into Antimatter Relay or Energy Condenser.

Easiest way to make infinite emc with thermal expansion

The trick I used in FTB Sky Odyssey was a personal EMC link or energy condenser putting out emerald ore (16k EMC) in to a pulverizer to get 2x emeralds (2x16k EMC) and that back in to the Personal EMC/MK1. Your best bet will likely be collectors from projecte followed by pumping in whatever renewable resource you can

Feeding items from a Dark/Red matter furnace to an energy condenser

I placed a red matter furnace next to an energy condenser so that all the ingots that I smelt would be transferred to the condenser and turned to diamonds, but it crashed my game. And now it crashes every time I load my save. I tried wit

You can also control the power output of the projecte energy condenser by controlling its power output. The default setting is 50W, and increasing the output to 100W will increase the amount of electricity it produces. If the projecte energy condenser is running, it will display on the screen a red line that indicates it is in an on or off state.

Energy Condenser

The Energy Condenser is a very useful object added by the Equivalent Exchange mod. It behaves in a way similar to the Transmutation Tablet, but is able to be made automatic. You put one target item in the spot on the upper left hand corner, and if the Condenser is hooked up to Energy Collectors, whether through Antimatter Relays or just the Energy Collector is next to it, the ...

Energy Collector MK3

Energy Collector MK3 is a tier 3 passive EMC generator added by ProjectE, based off the Collector MK3 added by Equivalent Exchange 2. In strong lighting, or if placed in the nether, it will generate a passive 40 EMC per second up to a maximum of 60,000 EMC. When placed adjacent to a Energy Condenser MK1, Energy Condenser MK2, Energy Condenser MK3, Anti-Matter ...
