Qatar paternoster storage system

Overview

What is a paternoster storage system (PNL)?

The paternoster storage system (PNL): A vertical carousel for maximum performance in a limited space A circulating storage system in the form of a paternoster is particularly popular for small parts warehouses, as the advantages are obvious. On the one hand, space can be optimally utilized by building "upwards".

Can a paternoster be used with open-fronted storage containers?

The paternoster can be used with open-fronted storage containers to efficiently handle small parts via small parts containers, for example. They can be stored loose and without packaging. Important: A paternoster storage system as a circulating storage system cannot be extended at will. This is due to the rigid outer shell.

What is a paternoster warehouse?

Note: A paternoster warehouse is based on the goods-to-man principle and facilitates the picking of small parts, which are made accessible quickly and compactly via so-called removal openings. It enables efficient, directly controllable storage, guarantees a high circulation speed and increases the storage area even where space is limited.

What is a paternoster & how does it work?

Shelving systems such as the paternoster can be tailored to the specific needs of the company, for example specifically for card index boxes or as a tiered paternoster for dispatch handling. It would also be conceivable to design the rail guide horizontally (so-called silo paternoster) in order to fully utilize storage space as far as possible.

What is a paternoster shelf?

The paternoster shelf (carousel shelf), with its specially adapted carrier sets

and receiving spaces, permits addition and removal of any material in a comfortable, and most importantly safe, manner. A specially developed modular system allows for cost-effective solutions despite custom adjustments to each application.

What is a paternoster rack system?

A distinctive feature is the suspension distance between the supporting elements, enabling access to the stored material from atop. The paternoster rack system enables the utilisation of unused and unprofitable space.

Paternoster-Vertical Carousel , Industrial Engineering Solutions

The Industrial Paternoster (IPN) Vertical Carousel saves time and money by optimising picking processes and minimising picking errors. Optional totes, bins or multi level carriers for small and large components increase storage flexibility; The TORNADO Automated Vertical Storage Machine is a dynamic storage and retrieval system

Constructor Tornado Storage Tower & IPN Paternosters

The IPN Paternoster is an excellent solution for optimising picking times, particularly when a batch picking process is being used. In addition, their rotating automated storage system saves floor space by providing efficient, height optimised storage. A Paternoster is the perfect system for storing many different types of goods.

Other benefits include high picking capacity and throughput speeds, with quick access to all items being possible. Vertical paternoster racking is useful wherever space or order-picking time is no longer sufficient with static storage. It can be connected to the Warehouse Management System through our Jungheinrich Logistics Interface at any time.

Storage Machines , Dexion UK

Our automatic storage systems can save you up to 70% on existing floor space, reduce picking errors by up to 70% and decrease picking time by more than 60%. Computer-controlled, the vertical or horizontal storage machines easily integrate with your existing warehouse management system, but also operate effectively as a standalone solution.

The motorized tyre carousel makes use of vertical ceiling height to organise, store, display and access the tyres in order to minimize your storage footprint. This semi-automated storage system for tyre storage provides high density storage in exceedingly little footprint which allows for saved space to be used for an alternative revenue generating system.

Weighing And Storage System. Paternoster not only assists operators for weighing the right amount of the right dyestuffs, but also helps them to neatly store the dyestuff boxes in a vertically designed structure. Thanks to the movable scale set on the conveyor rail, the operator's need for movement has been reduced and the weighing process

Paternoster Hänel Storage Systems

Goods stored in a carousel system are kept on shelves that rotate vertically. These carousel solutions function according to the Ferris wheel principle. Since carousels offer compact storage, they require less space and thus help reduce rent, heating and electricity costs. Storage carousels are based on the "

Paternoster racks system

The design of our paternoster rack system permits the storage of extremely heavy and bulky goods (more than 2 tons per carrying unit). Thanks to the variable layout of the carrying units, goods with a length of up to 12 metres can be carried. Short access times.

Producer of industrial paternoster rack systems

Our paternoster shelves (carousel shelves) and storage system are unique automated paternoster shelves, based on mechanically simple, low-wear chain drives.
