Regulations on matching new energy with energy storage

Overview

What does the European Commission say about energy storage?

The Commission adopted in March 2023 a list of recommendations to ensure greater deployment of energy storage, accompanied by a staff working document, providing an outlook of the EU's current regulatory, market, and financing framework for storage and identifies barriers, opportunities and best practices for its development and deployment.

Are the proposed national electricity market rules relevant to energy storage?

A cross-matching exercise between the provisions of the European legislation and the proposed national legislation has led to the identification of the gaps and discrepancies in the elements of the proposed national electricity market rules in relevance to energy storage.

Does the Department need a regulatory and legislative framework for energy storage?

As an emerging technology, the Department recognizes the need for a regulatory and legislative framework for energy storage. Such a framework should be developed through a thorough policy analysis process to ensure an appropriate level of consideration.

Is energy storage regulated?

Whilst the Department of Business, Energy & Industrial Strategy ("BEIS") and Ofgem have been supportive of energy storage and recognise the benefits and flexibility provided by the various technologies, there is no specific legislation on or regulation of storage at present.

Is energy storage a licensable activity?

The Consolidated Version 2.2.0 of the Electricity Market Rules recognizes that there is a need for a regulatory and legislative framework for energy storage, which should be based on an appropriate level of policy consideration.

Therefore, the Consolidated Version 2.2.0 of the Electricity Market Rules makes energy storage a licensable activity.

What should the Commission do about energy storage?

2. Calls on the Commission to develop a comprehensive strategy on energy storage to enable the transformation to a highly energy-efficient and renewables-based economy taking into account all available technologies as well as close-to-market technologies and keeping a technology-neutral approach to ensure a level playing field; 3.
