## Overview

---

Is solar energy a viable source of energy in Yemen?

Within a few years, solar energy in Yemen has increased its capacity by 50 times and has recently become the primary source of electricity for most Yemenis. Furthermore, the paper discusses the difficulties and challenges that face the implementation of renewable energy investment projects.

How is Yemen dealing with energy problems?

Yemen is dealing with the dilemma of energy networks that are unstable and indefensible. Due to the fighting, certain energy systems have been completely damaged, while others have been partially devastated, resulting in a drop in generation capacity and even fuel delivery challenges from power generation plants.

What is the main energy source in Yemen?

According to the International Energy Agency, in 2000, oil made up 98.4% of the total primary energy supply in Yemen with the remainder comprising biofuels and waste (International Energy Agency). Natural gas and coal were introduced into the energy mix around 2008, and wind and solar energies were added around 2015.

How has energy crisis impacted Yemen's economy?

**Abstract:** A severe energy crisis has plagued Yemen for decades, and most of the population lack access to electricity. This has harmed the country's economic, social, and industrial growth. Yemen generates electricity mainly from fossil fuels, despite having a high potential for renewable energy.

Is Yemen a good place for wind energy?

Yemen has a long coastline and high altitudes of 3677 m above sea level, making it an ideal location for wind energy generation, with an estimated 4.1 h of full-load wind per day. The wind energy can be converted into mechanical

and electrical energy, and it could be a viable option for bolstering the electricity power sector.

Does the conflict affect Yemen's electricity and energy sector?

This study reviews Yemen's electricity and energy sector before and after the onset of the conflict that began in 2015 and presents the current state of power generation, transmission, and distribution systems in the country by assessing the negative impact in the electricity sector caused by the ongoing conflict. 2.
