Save money with solar Serbia

Overview

Is solar power possible in Serbia?

With many sunny days, Serbia has great potential for solar energy. However, the use of solar power in residential buildings and individual houses is still in its early stages. The country's recently adopted energy laws, combined with the lower costs of solar technology, raise expectations that this may soon change.

Is Serbia a good market for solar energy?

In conclusion, Serbia is still a very young but promising market in the solar energy sector, with some fast-growing solar distributors. Many top solar distributors, solar panel manufacturers and suppliers are in partnership with European companies.

Will Serbia offer solar incentives to power production companies?

The Serbian government announced that it would offer power production firms solar incentives to encourage and promote rooftop solar installations in the country. The government also announced that the companies selected for this benefit would be determined through the auctions.

Why is solar energy becoming an attractive prospect in Serbia?

There are several reasons why solar energy is becoming an attractive prospect in Serbia, and we'll be looking at some of them. Solar solutions or projects appeal massively in Serbia because they're durable. According to research, the average lifespan of a solar panel is 20-25 years, while that of the battery and inverter is a decade.

How long does it take to install a solar system in Serbia?

"Nowadays, we work more on on-grid systems, for users who have electricity but want to make additional savings with solar energy. An average household in Serbia would require a solar plant of 5-10 kW. Such a system can be paid

off in five to seven years. The installation is not complex and can be finished within a couple of days,” adds Nikola.

How does Serbia get its energy?

Serbia gets its energy from three sources, namely fossil fuels, hydro, and renewable energy sources. The main utility company in the country, Elektroprivreda Srbije, has a total capacity of 7,662 megawatts that produces roughly 39 terawatts of electricity annually.
