### What is scale microgrids?

Scale Microgrids designs, builds, finances, and operates cutting edge distributed energy assets that offer cheaper, cleaner, and more resilient power.

### Why should you use microgrids?

Go beyond the grid with cheaper, cleaner, and more resilient on-site energy from the industry leader in microgrids. Our microgrids deliver results for your organization, with optimized on-site energy resources that provide cost savings, lower emissions, and enhanced resilience.

### What are advanced microgrid controls?

Advanced microgrid controls automatically optimize the operation of each resource to provide benefits like everyday electricity cost savings, supplementary power capacity, lower emissions, and resilience during utility outages.

### What if a utility outage is a microgrid?

In the event of a utility outage, our microgrids can operate independently (or “island”) from the grid and ensure critical operations stay online. Scale manages everything from microgrid design and construction to ongoing operations and maintenance, making a complex process headache-free.

### Utility Interest in Microgrids is Up: What's Driving the Trend?

Municipal utilities, especially, see the IRA as an opportunity to lower the cost of deploying microgrids, give microgrids a test and learn about their advantages, said Dillow-Walsh. BlockEnergy systems are eligible for a 30% investment tax credit under the IRA because they include solar, storage, controls and electric vehicle (EV) charging.

## Microgrids

Microgrids can serve an area as small as a single neighborhood, an apartment complex, or the campus of a hospital, business or university. But the same idea can also scale up to serve an entire city. A microgrid can also power just a key portion of its area, such as emergency services and government facilities.

## Towards collective energy Community: Potential roles of microgrid ...

The generation of microgrid consists of large-scale distributed non-dispatchable energy supply, so it is necessary to consider maximizing the power extraction under the specific weather conditions. The first layer control from the bottom is the internal control of power generation implemented in each distributed generator.
