

## Solar Energy South Africa

# Sea-based new energy storage planning

## Overview

---

Is Subsea energy storage a viable alternative to floating onboard energy storage?

Subsea energy storage is an emerging and promising alternative to conventional floating onboard energy storage. In this review, various potential subsea electricity and hydrogen energy storage solutions for 'floating offshore wind + hydrogen' are examined and compared.

What is subsea battery energy storage?

Subsea battery energy storage is one such promising solution. Modular Li-ion battery energy storage systems are deployed on the seabed and connected to floating wind turbines and offshore platforms via flexible cables. The seawater can effectively transfer and store the heat generated by the battery energy storage system.

Why should energy storage systems be deployed on the seabed?

Third, the ocean provides an ideal heat sink and seawater with near-constant temperature is an ideal heat transfer medium, thereby facilitating heat management of energy storage systems. Certainly, it will be more complex to deploy energy storage systems onto the seabed.

Is Subsea energy storage a good investment?

After all, high security and reliability are the baseline of energy storage in 'floating offshore wind + hydrogen' systems. Second, additional space is necessary if the scale of the energy storage system is very large, thereby lifting the investment. In contrast, these challenges could be avoided by subsea energy storage.

Is subsea battery energy storage a viable solution for offshore wind farms?

For floating offshore wind farms, it will be safer if the medium- and large-scale battery energy storage systems can be deployed far from the wind turbines

and offshore platforms. Subsea battery energy storage is one such promising solution.

When will Subsea energy storage and floating energy storage compete?

The period from 2024 to 2030 will be critical for the long-term competition between subsea energy storage and floating energy storage. More demonstrations, improvements, and innovations should be conducted in this period, especially focusing on the utility-scale demonstrations at sea.
