How many volts can a semplos BMS charge?

Look like I'm on the same journey as you, I have the Semplos BMS which came with my vertical unit and 16 EVE 280 Cells. Did you manage to setup your BMS parameters, I thought your settings in your sheet seemed a bit high. I was only charging to 3.5v per cell which gives a 56volt max and a safety cut off of 3.65v 58.4v.

What is a BMS & how does it work?

The BMS is simply passing information to the control device. The Inverter charger settings must be set **INSIDE** the limits of the BMS. Example: If the BMS Low Voltage Cut Out is set to 46V then the Inverter should be set to stop drawing power from the battery at 47V to 48V. Likewise for all the other settings.

Da wird der Ladestrom noch vor dem Erreichen der 100% heruntergenommen.
