# Solar on installments Germany

## Overview

---

How many solar PV systems are installed in Germany?

German Solar PV market: wrap-up 2023 More than one million new solar power systems with an output of around 14 GW were installed in Germany last year, more than twice the number of new PV and storage systems as were installed in the previous year.

How many solar power systems were installed in Germany in 2023?

More than one million new solar power systems with an output of around 14 GW were installed in Germany last year, more than twice the number of new PV and storage systems as were installed in the previous year. In 2023, according to data from the Bundesnetzagentur, Germany's federal network agency, Germany saw 14.1 GW.

What is the future of solar power in Germany?

Sustained growth is forecasted in the market for new PV capacity for years to come. Concurrently, battery systems are expected to reach a capacity of at least 100 GWh by 2030, reflecting a transformative shift within the German energy system towards renewable energy integration.

How many GW of PV should be installed in Germany?

By 2030, 215 GW of PV should be installed in Germany. To this end, annual expansion is to be tripled, from 7.5 GW in 2022 to 22 GW in 2026. Roughly half of the expansion should be on roofs and half on ground.

Does Germany have a solar mandate?

Solar Package I, approved in August 2023, aims to accelerate PV installation and enhance citizen participation, albeit, it is still under negotiation within the Parliament. While a solar mandate was considered, it was omitted in the final strategy. Yet, some German states have implemented their own mandates.

Why do people store solar power in Germany?

To date, most battery storage systems in the German electricity system have been used exclusively to optimize self-consumption. Consequently, an exponentially growing number of homeowners and companies store solar power for times when solar generation is low.
