Solar panel installation method

Overview

How do I install a solar panel?

Installing your solar panel is a straightforward process though calling in professional installers is recommended. Making sure these installers are accredited by MCS is highly important, so as to ensure a high standard of installation. A solar panel will be most effective if you have a south-facing roof.

Should you consider a solar panel installation?

From cutting energy bills to reducing carbon footprints, there are many reasons that homeowners may want to consider solar panel installation. But there's a lot to think about, and, understandably, many people aren't sure where to begin with planning such a project.

How does a solar panel installation work?

The installer will have to lift some of the roof tiles to fix the anchors to the rafters in the loft. This will give the solar panel mounts a stable foundation, and will make sure they don't get damaged in stormy weather. Once the roof anchors have been fixed to the property, the installer will attach the solar panel mounting system to them.

Do you need a survey to install a solar panel?

So first, a professional surveyor will check your roof and rafters to ensure that a solar panel installation can go ahead safely. The results of the survey may affect the price quoted by your solar panel providers. With that done, the installation can begin.

How much does it cost to install solar panels?

For a 2,000 square foot home, expect solar installation to run from \$10,000 – \$20,000. Other factors affect pricing, such as the size of the system, demand, etc. Some installations may be less expensive. What are the dangers of

installing solar panels?

.

How do solar panels connect to a roof?

In short, the solar panels connect to a roof-mounted frame. The solar panels sit on the frame and are clamped with either a bolt, bracket, or other clamping devices. If you are using a kit, the clamps will match the frame making it easy to secure the panels to the roof.
