How to Choose the Best Solar Business Model for Your Company  
CAPEX Model Explained  
The CAPEX model involves the business taking full ownership and responsibility for the solar power system. This means the business purchases the solar panels, inverters, and other equipment upfront to install on their property.  
OPEX/PPA/RESCO Model Explained  
Choosing the Right Solar Business Model  
Investing in a Sustainable Future  
What is a solar PV business model?

In the residential sector, this business model is very popular for singular PV systems, in which homeowners are interested in installing a distributed generation on their rooftop and are able to pay for the upfront cost.

What business models do solar power companies use?

Further, business models such as online fund-raising, “individual rooftop leasing of PV power plant”, “Internet + PV”, and “PV +” remain immature, so that they have little value for advancement. The remaining three business models—the host-owned, EMC model, and TPO model—have been in place for a long time and have a wide range of applications.

What are solar business models?

They contain the nature of value proposition, value creation and value delivery in the process of solar businesses. The business models are concentrated around the way rooftops are being utilized for solar PV installation. Accordingly four business models could be discovered in the markets which are explained through the following diagrams. 1.1.1.

How do policymakers understand solar business models?

Policymakers must understand solar business models from a firm perspective. Customers and their needs are central in the business models of solar firms. Capabilities are determinant in the design of solar business models. A worldwide transition towards sustainable energy systems requires the diffusion of renewable electricity technologies.

Will there be a pilot project based on a solar power business model?

No pilots as of yet have resulted from this project and the results of the study are not yet available to the public. The Department of Energy (DOE) is currently supporting the Solar Electric Power Association (SEPA) to develop new PV utility business model concepts via working groups. The results from the working group are expected in early 2008.

How can a market-centric business model help solar PV companies?

The disruptive nature of solar PV technology, limited awareness and high financial requirements often make solar PV disadvantaged compared with its competition , . A market-centric business model can help solar PV companies address consumers' concerns while offering solutions to enhance its adoption.
