# Solar power generation can be used for heating

## Overview

How is solar energy used?

Solar power is used in two main ways: generating electricity (like with rooftop solar panels) or generating thermal energy (like with concentrated solar power plants). For most homeowners, solar panels that convert solar energy to electricity are the best use of solar energy because it allows them to save on electric bills.

How do you use energy from the Sun?

The two main ways to use energy from the sun are photovoltaics and solar thermal capture. Solar photovoltaic systems are common for smaller-scale electricity projects (like home solar panel installations ), while solar thermal capture is typically only used for electricity production on massive scales in utility solar installations.

What is solar energy?

Solar energy is energy from the sun that we capture with various technologies, including solar panels. There are two main types of solar energy: photovoltaic and thermal. The “photovoltaic effect” is the mechanism by which solar panels harness the sun’s energy to generate electricity. Want to take advantage of solar energy yourself?

Can solar hot water be used to heat a home?

A conventional boiler or immersion heater is normally used to make up the difference. Larger solar hot water arrays can also be arranged to provide some contribution to heating your home. However, the amount of heat provided is generally very small (less than 10% of the home’s heating requirement), so it is not usually considered worthwhile.

How do solar thermal panels work?

Unlike traditional photovoltaic solar panels that convert sunlight into electricity, solar thermal panels harness the sun's energy to directly heat water, which can then be used for space heating, domestic hot water, and even pool heating.

Can solar panels generate electricity?

Yes, it can – solar power only requires some level of daylight in order to harness the sun's energy. That said, the rate at which solar panels generate electricity does vary depending on the amount of direct sunlight and the quality, size, number and location of panels in use.
