# Solar power generation on the coastline

## Overview

---

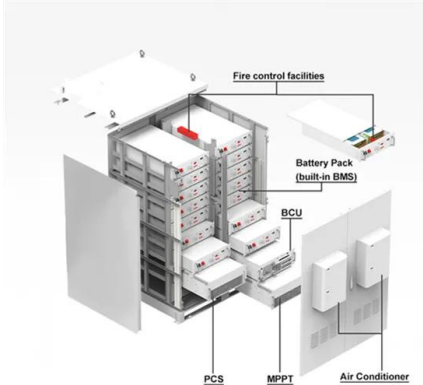

Coastal regions in many developing countries are only partially connected to continental electrical grids and lack of major power has left them less developed. Most coastal regions have a good renewable energy potential. In this context, one of these sources is ocean energy. Most ocean energy technologies fall.

The aim of this research was to prove the viability of a coast-based hybrid solar-hydro power plant that could provide power during peak periods, thereby improving overall utilization and economics of the electric.

It is impossible to record here all the detailed steps leading to the final design. The more important steps may be divided into the following stages: 1. Given the basic parameters such as availability of head and depth of sea.

Made as a practical design application, is a conceptual design and cost estimates for a CPP based near Mishap, Gujarat in India The plant is located 7 km from shore where the water depth is ~11 m. The mean Tidal range between.
