Solar power grid collapse

Overview

The March 1989 geomagnetic storm occurred as part of severe to extreme solar storms during early to mid March 1989, the most notable being a geomagnetic storm that struck Earth on March 13. This geomagnetic storm caused a nine-hour outage of Hydro-Québec's electricity transmission system. The onset time was.

The geomagnetic storm causing this event is believed to be the result of two separate events known as (CME) on March 10 and 12, 1989. A few days before, on March 6, a very large X15-class .

One of the few publicly reported military operations impacted was the component of the (UN) force which was deployed to at the time. The storm occurred just as the advance elements of the contingent arrived in.

• • • • .

The variations in the tripped on 's . The utility's very long transmission lines and the fact that most of sits on prevented current flowing through the earth, finding a less.

On August 16, 1989, another storm caused a halt of all trading on the when three redundant disc drives all failed. Since 1996, geomagnetic storms and solar flares have been monitored from the .
