Why is energy so expensive in Somalia?

Somalia and its international peacekeeping missions face some of the highest energy costs in the world, with rates of energy access of less than 40% nationally, and only 11% in rural areas. Ongoing security and governance challenges in the country further complicate Somalia's energy sector, which is among the most decentralized in the world.

Somalia has produced and is implementing a Power Master Plan which outlines strategies to increase energy production, increase the supply of renewable energy, and for government to establish regulatory authorities and a legislative framework to improve market efficiency.

How much power does Somalia have?

Current generation capacity is 106 megawatts, largely composed of expensive and pollutant diesel generators, though Somalia has great potential for solar and offshore wind power generation that can support a transition to green energy and reduce GHG emissions.

Why is foreign investment important in Somalia?

**Sector Spotlight: Energy** The supply and demand gap of the energy sector in Somalia is huge and requires foreign investment to reduce the gap and create accessible and affordable energy to fuel Somalia's economic growth. What is the energy sector like in Somalia?

**Energy Sector** Strong demand for affordable electricity: The need for cheaper and reliable electricity throughout Somalia is high and growing, as evidenced by the expansion of independent power providers and the establishment of

microgrids in a growing number of cities.
